Substitute for Princess; Castle; Jewel; Flower; Lilly; Ace; King; Queen; Jack; 10; 9;

Substitute symbol appear in reel: 1, 2, 3, 4, 5

Number of visible symbols on reels	Win Multiplier	Payout
1 Symbol	2	0
2 Symbols	2	0
3 Symbols	2	0
4 Symbols	2	0
5 Symbols	2	4,800

How to Play

The player places a bet automatically by entering the game.

The player may now adjust the number of credits they play per line by clicking on the BET UP or BET DOWN buttons. They may also adjust the number of lines played by clicking on the LINES UP or LINES DOWN buttons.

After the player has adjusted their bet, the player may click the SPIN button. The machine will then animate the reels, eventually stopping on a location generated by Java application server. After all the reels stop, the game will see if the current combination is a winning one.

If so, the account menu information is adjusted and the game ends. The WIN area displays the amount the player wins on a single game. After the game is over, if the player wins, this value is added to the players balance and when the SPIN button is clicked, the WIN AMOUNT resets to zero. If the player does not win, the amount shown under WIN is zero.

Press the "Gamble" button when you have won a hand. This allows you to play a bonus game where you can double the amount of chips that you have won.

Pressing the LOBBY button unloads the Shockwave movie from the browser and returns to the initial game page. If the player has placed coins into the machine before selecting the LOBBY button, then these funds are returned to the player and this action is not reflected in the players balance until they enter another game or view their balance on the Player Balance screen.

Casino Rules

Malfunctions of any sort (software or hardware) voids the play.

Slots Rules

The rules for this game were last changed on 2009-09-23 07:27:47.593
